EXPENSIVE, COMPLEX ENVIRONMENT

End-Stage Renal Disease (ESRD) has a unique path to Medicare entitlement, regardless of age.

Complex Medicare rules govern when private health plans are the primary payer for services.

Dialysis providers charge very high prices to maximize profits before Medicare becomes the primary payer for services.

Our clients faced average monthly charges of \$110,000, or 3,290% of Medicare allowable rates, prior to our program.

UNIQUE, PATENTED SOLUTION

We have a unique solution that saves an average of \$100,000 per patient per month.

DialysisPPO is the only company with a patented solution for cost containment of ESRD.
(USPTO #8457982)

Our team of experts will manage the Medicare enrollment, claim pricing, and appeals processes.

TIME-TESTED, PROVEN PERFORMANCE

Since our inception in 2006, we have saved our clients more than \$315,000,000.

We have successfully defended more than a thousand appeals on behalf of our self-funded health plan clients.

Plan members are protected from balance-billing upon full implementation of our program.

Home dialysis treatment, stop-loss carve-out strategies, and negotiated agreements are also available program options.
